Project Overview

In this lighting project, the high school decided to replace all of the T12 fixtures in its classrooms with brand new, more efficient two-lamp T8 fixtures. In the gymnasiums, the existing 400W metal halide fixtures were replaced with four-lamp, T5HO high bay fixtures. After the upgrade, a total of 118,852 watts were reduced! This will amount to a substantial amount of electrical savings for many years to come.
